- 8** Using the SALUS Smart Home App
- 10** Troubleshooting
- 11** More Help

Pairing your SALUS Thermostat system with App

Step 1: Set Up the Gateway (HUB)

1. Open the SALUS Gateway (HUB) box.
2. Plug the HUB into a power socket and connect it to your Wi-Fi router using the included Ethernet cable.
3. Download the SALUS Smart Home (Premium Lite) app from the App Store (iOS) or Google Play (Android).
4. Open the app and create an account using your email address and a password.
5. Check your email for a confirmation message. Click the link in the email to verify your account.
6. Return to the app and sign in using your login credentials.

Step 2: Activate the Gateway

1. In the app, scroll down and tap "Activate Gateway".
2. Select "Connect via LAN" and follow the on-screen instructions.
3. Fill in the required details to complete gateway activation.

Important: Once the gateway is set up, turn off the fused spurs or sockets supplying power to the radiators. You will be setting up the thermostats room by room.

Step 3: Add and Pair Equipment

1. Tap the menu icon (≡) in the top-right corner of the app.
2. Go to "Equipment" > "All Equipment".
3. Tap "Add New Equipment", then "Scan for Equipment".

Step 4: Pair Radiators (Smart Relay)

1. Turn the power on to the radiator(s) in the room you're setting up.
2. The receiver unit (white box on the wall) should start flashing for a few seconds, then turn solid or off—this means it's ready to pair.

Step 5: Set Up the Thermostat (SQ610RF)

1. Open the thermostat box and press and hold the tick (✓) button for 5 seconds until the screen lights up.
2. Press the tick (✓) again to confirm English as your language.
3. The display will show "Connect with the Network"—follow the on-screen prompts.
4. When asked what you are connecting to, select "Radiators".
5. If prompted for TRVs, select "0".

Step 6: Confirm Equipment in App

After pairing, the app will show newly detected devices:

- SQ610RF (the thermostat)
- Smart Relay (the receiver connected to the radiator)

Note: If a room contains more than one radiator, multiple Smart Relays may appear in the app. Ensure all relays in that room are turned on so they can be detected during setup.

1. Tap each device and choose "Connect Equipment".
2. Name the devices appropriately:
3. Thermostat example: "Bedroom Thermostat"
4. Smart Relay(s) example: "Bedroom Relay 1", "Bedroom Relay 2", etc.
5. Tap on each relay, scroll down, tap "Don't Pin", and then "Complete Setup".
6. Tap on the thermostat, select the Smart Relay(s) it should control, then tap "Next".

Step 7: Final Pairing and Thermostat Settings

1. Wait a few moments until the app shows "Smart Relay Found".
2. Tap the box under the heat symbol (three curved lines) and press "Pair".
3. Wait for confirmation.
4. Proceed to set up your thermostat:
 - Choose "No" when asked to use the default schedule (you'll create your own).
 - Select your preferred 12/24-hour clock format.
 - Tap "Finish".

Using the SALUS Thermostat and App

1. Controlling the Thermostat (SQ610RF)

Once your thermostat is paired, you can control heating directly on the device:

1. Adjust Temperature:

- Use the up ▲ and down ▼ arrows on the thermostat screen to set your desired room temperature.
- The heating will activate if the room temperature is below your set temperature.

2. Tick Button (✓):

- Press to confirm selections or to access options.

3. Manual Override:

- Any temperature change made on the device will override the schedule temporarily (until the next programmed time slot).

4. Screen Symbols:

- Heat Icon (three curved lines): Heating is currently active.
- A with a diary next to it: A schedule is active.
- Hand Icon: Manual override is active.

Using the SALUS Smart Home App

Viewing Devices

- Open the app and sign in.
- All the devices should be on Home page or
- Tap “All Equipment” to see your thermostats and relays.
- Tap a thermostat name (e.g. "Bedroom Thermostat") to open its control panel.

Setting a Temperature

- Use the slider to adjust the target temperature.
- The change takes effect immediately and will override the current schedule if there is one.

Creating or Editing a Schedule

1. Tap the thermostat you want to set a schedule for.
2. Scroll down where it says “Schedule” and click on pen symbol at bottom right.
3. Choose “5/2” (weekday/weekend), “7-day”, or “24-hour” mode.
4. Set time blocks and desired temperatures for each period.
5. Tap Save when done.

Switching Modes

Tap the to choose:

- Follow Schedule: Uses your schedule
- Permanent Hold: Holds a set temperature until you change it
- Standby: Turns off heating

Troubleshooting Tips:

1. Can't Find the Smart Relay in the App

Possible Cause:

- Thick walls or other obstacles interfering with the signal
- Long distance between the router and the Smart Relay unit

Solution:

- You may need to use a SALUS signal booster (range extender) to strengthen the connection between the hub and the relay.

2. Can't Find the Gateway (HUB)

Possible Cause:

- Your phone may not be on the same Wi-Fi network as the hub
- Mobile data is active instead of Wi-Fi
- The HUB is connected to a Wi-Fi extender instead of the main router

Solution:

- Ensure your phone is connected to the same Wi-Fi network as the router the HUB is plugged into
- Disable mobile data and ensure Wi-Fi is enabled on your phone
- Make sure the HUB is connected to the main Wi-Fi router, not a Wi-Fi extender or secondary access point
